

John Hobbs request for the NSF Cooperative agreement

- Each institution receiving funds through the NSF will have to fill out 1030 [1].

These will need to be signed by the OSP, which can be done after sending them to John H.

- A budget (i.e. the 1030) for each of the five years of funding beginning Feb. 1st, 2017 and a cumulative for all years.

If your institution has multiple projects NSF funded:

- HL-LHC R&D goes into one set of 1030s. If you have multiple R&D projects at your institute, all go in the same set of 1030s.

- Tier 2 computing (if exist) goes into one set of 1030s

- Everything else (e.g. M&O) goes into its own separate 1030s.

Note that the budget is still moving around and management will send the numbers once there are settled.

For now, you can start with the amount of funds allocated for your group in the R&D budget [4].

The budget should not overlap with the MREFC funds for the construction.

- A budget justification (like the ones you prepare for grants with DOE or NSF).
- A Statement of Work [2]

I made a template based on something I recently prepared. I don't warranty that this won't need changes.

I would assume you'll need one of these per funding year.

- Eventually a Stony Brook form [3]. It has to be signed by the institution's OSP but we don't expect this in time for the resubmission.

R&D before Feb. 1st, 2017 will be funded by the existing Columbia sub award.
